# BinairoPress

Half filled, half open. Never three in a row.

Fill every cell with a filled or an open circle. Each row and column holds exactly half of each kind, never three of a kind in a row (across or down), and no two rows or columns may end up identical.

Every puzzle in this book was re-solved by a counting program before it was printed: each one has exactly one solution, and the full solutions are at the back.
